                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is the human WSX receptor variant 13.2, which can be used to identify and purify ligands and activators. An anti-WSX receptor antibody can be used as an agonist to activate the WSX receptor, leading to enhanced proliferation or differentiation of a cell expressing the WSX receptor. It can also be used to decrease body weight and/or fat-depot weight and/or food intake in an obese mammal. WSX receptor ligands can be used to erythroid blood cell lineages. This is useful when a mammal, captured a human, is suffering from decreased blood cell levels, i.e. anaemia, caused by chemotherapy, radiation therapy or bone marrow transplantation therapy. It can also be used to repopulate blood cells in a mammal. The products can also be used to treat, polycystic ovarian disease, cardiovascular diseases, osteoarthritis, dermatological disorders, hypertension, insulin resistance, hypercholesterolaemia, hypertriglyceridaemia, cancer and cholelithiasis.

body weight. The invention also relates to a method of identifying therapeutic compounds for the treatment of a body weight disorder. The method involves contacting a cell that expresses a mammalian ObR protein, a JAK2 protein and a mammalian SOCS-1 protein with a test compound. The method is useful for identifying compounds which modulate ObR gene expression and gene product activity, which can be used as agents to control body weight particularly as therapeutic agents for treating body weight disorders, including obesity, cachexia and anorexia.

                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents the obesity (OB) receptor D protein. This sequence has one or more of the biological properties of naturally occurring OB receptor protein. The OB receptor proteins and OB receptor/OB protein complexes are used for the treatment of obesity, diabetes, high blood lipid levels and high cholesterol levels. The proteins may also be used to treat an individual for weight loss or weight maintenance required for purely cosmetic purposes.

Identifying anorexia or protein, cachexia, JAK2 for treating bod comprises contac protein and mam body weight disorder, e.g. obesity, ntacting cell expressing mammalian Ob mammalian SOCS-1 protein with test

Disclosure; Page 109pp; English. . -

The method involves contacting a protein, a JAK2 protein and a man compound. The method is useful for ohr gene expression and gene prodagents to control body weight par treating body weight disorders, if the present sequence is human Observed. The patent encoding th encoding them. ObR protein participate body weight. The invention also relate therapeutic compounds for the treatmen Note: discloses S obese pese receptor (ObR) proteins and nucleic acids in participates in the regulation of mammalian ion also relates to a method of identifying for the treatment of a body weight disorder. Itacting a cell that expresses a mammalian ObR and a mammalian SOCS-1 protein with a test useful for identifying compounds which product ObR particul for identifying compounds which modulate oduct activity, which can be used as articularly as therapeutic agents for including obesity, cachexia and anorexia. ein mutant (Yll41F). he specification but is derived

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              γ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δÃ
The invention provides a method for identifying modulators of binding of CC a phosphorylated leptin receptor with tyrosine phosphatase ID PTP-ID). CC The method comprises: (a) contacting a tyrosine-985 phosphorylated leptin receptor or its phosphorylated fragment with protein PTP-ID or its fragment in the presence and absence of a candidate agent under CC conditions in which in the absence of the agent the binding of the phosphorylated leptin receptor or fragment with PTP-ID or its fragment CC can be detected; and (b) detecting the binding of the phosphorylated CC leptin receptor and PTP ID; where an increase in binding detected in the presence of the agent, indicates that the agent enhances binding, and a decrease in binding in the presence of the agent indicates that the agent is a binding inhibitor. Modulators of tyrosine-985-phosphorylated leptin receptor-dependent PTP-ID phosphorylation are useful as drugs in weight CC content of animals, particularly in mammals. Disorders that can be treated by PTP-ID modulators include obesity and its associated diseases, associated with cancer and AIDS. Additionally the agents identified may be useful in agriculture where body weight of domestic animals can be

                Human Ob receptor (ObR) (AAW19116) is a novel polypeptide that participates in the control of body weight and which is involved in signal transduction triggered by the binding of its natural ligand, Ob (leptin). It is a member of the class I cytokine receptor family. Its amino acid sequence was deduced from a foetal brain cDNA clone (AAT69592). The receptor corresponds to the long form mouse ObR (AAW19115). ObR proteins, peptides, antibodies, agonists and antagonists can be used in the diagnosis and treatment of body weight disorders such as obesity, cachexia and anorexia.

                                                                                                                                                                                                                                                      The ob-receptor (OB-R), a member of the cyconic incorrect transcribed in the hypothalamus and is involved in obesity. The replacement mutant has had amino acids 420-496 the second CK-F3 module in OB-R deleted and replaced by amino acids 500-632. The replacement mutant together with mutants lacking a functional first module or a functional intracellular domain can be used in assays fo detection of ligands, agonists, antagonists and ligand mimetics. The leptin agonists identified can be used in situations where leptin insufficiency causes obesity, diabetes or infertility. The leptin antagonists identified can be used in the treatment of anorexia and cachexia. The mutant receptor nucleic acids can also be used in ger therapy for weight control, e.g. for treating obesity or anorexia.

                                                                                                                                                                                                              This sequence represents the obesity (OB) receptor C protein. This sequence has one or more of the biological properties of naturally occurring OB receptor protein. The OB receptor proteins and OB receptor/OB protein complexes are used for the treatment of obesity diabetes, high blood lipid levels and high cholesterol levels. The proteins may also be used to treat an individual for weight loss of weight maintenance required for purely cosmetic purposes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1197

                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is the human WSX receptor variant 6.4, CC which can be used to identify and purify ligands and activators. CC An anti-WSX receptor antibody can be used as an agonist to activate CC the WSX receptor, leading to enhanced proliferation or CC differentiation of a cell expressing the WSX receptor. It can also be used to decrease body weight and/or fat-depot weight and/or food coll intake in an obese mammal. WSX receptor ligands can be used to contake in an obese mammal. WSX receptor ligands can be used to contake in an obese mammal. WSX receptor ligands can be used to contake in an obese mammal. WSX receptor ligands can be used to contake in a number of lymphoid, myeloid or contake in a number of lymphoid, myeloid or contake in a number of lymphoid, myeloid or contake in an ammmal, is suffering from decreased blood cell levels, i.e. anaemia, caused by chemotherapy, radiation therapy or bone marrow transplantation therapy. It can also be used to repopulate blood cells in a mammal. The products can also be used to treat, collected covarian disease, cardiovascular diseases, contake in a disease, cardiovascular diseases, insulin contake in the products of the products of the light insulin contake in the products of the light insulin contake in the products of the light insulin contake in the products of the light insulin contake in the products of the light insulin contake in the products of the light insulin contake in the products of the light insulin contake in the products of the light insulin contake in the products of the light insulin contake in the products of the light insulin contake in the light insulin contake in the products of the light insulin contake in the light insulin contake in the light insulin light insulin contake in the light insulin light insulin light insulin light insulin light insulin light insulin light insulin light insulin light insulin light insulin light insulin light insulin light insulin light insulin light insulin light insulin light insulin light insulin light in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is the human WSX receptor variant 12.1, which can be used to identify and purify ligands and activators. An anti-WSX receptor antibody can be used as an agonist to activate the WSX receptor, leading to enhanced proliferation or differentiation of a cell expressing the WSX receptor. It can also be used to decrease body weight and/or fat-depot weight and/or food intake in an obese mammal. WSX receptor ligands can be used to enhance proliferation or differentiation of lymphoid, myeloid or erythroid blood cell lineages. This is useful when a mammal, cansed by chemotherapy, radiation therapy or bone marrow transplantation therapy. It can also be used to repopulate blood cells in a mammal. The products can also be used to treat, costeoarthritis, dermatological disorders, hypertension, insulin resistance, hypercholesterolaemia, hypertriglyceridaemia, cancer and cholelithiasis.
